B.T. COTTON SEED CUM FERTILIZER PLANTER
(AJIT)

GOVERNMENT OF INDIA
MINISTRY OF AGRICULTURE
(DEPARTMENT OF AGRICULTURE & COOPERATION)

NORTHERN REGION FARM MACHINERY TRAINING AND TESTING INSTITUTE
TRACTOR NAGAR, SIRSA ROAD, HISAR-125001 (HARYANA)
C. Wear of soil engaging component:
The test implement was operated for 20.25 hours. Wear of soil engaging components (furrow openers) is given in Table-1.

**TABLE-1: Wear assessment of furrow openers on mass basis**

<table>
<thead>

7. FIELD TEST

Field test of B. T. Cotton seed cum fertilizer planter was conducted at HLRDC Hisar for 20.25 hours, consisting of 5 trials. The implement was used for sowing B. T. Cotton seed of two different variety in field. The detailed test results are given in Annexure-IV and are summarised as under in table 2:-

**TABLE-2: Summary of field test results:**

<table>
<thead>
<tr>

<td>Drawbar power requirement, kW</td>
<td>2.0 to 2.9</td>
</tr>
</tbody>
</table>

Northern Region Farm Machinery Training & Testing Institute, Hisar
7.1 Quality of work:
Seed to seed distance during field test was observed from 32.9 to 41.8 cms against the theoretical distance of 35.9 cms. The percentage variation in seed to seed distance from minimum and maximum against the theoretical was observed from -8.4 to +16.4. Missing of seed dropping was observed Nil.

The average depth of seed and fertilizer placement was observed as 8.3 to 9.1 cm. Seed and fertilizer rate was found 1.76 to 2.15 Kg/ha and 90.73 to 135.6 Kg/ha, respectively.

7.2 Rate of Work & Fuel consumption:
The average width of sowing was observed as 2.77 to 2.89 m. The area covered is 0.86 to 0.99 ha/h and the fuel consumption varied from 1.10 to 1.87 l/h.

7.3 Field efficiency and labour requirement:

Field efficiency of Planter was observed as 65.6 to 81.1%. Two labours are required to operate the planter. One skilled labour to make adjustments / calibration of the planter and operate the tractor and other unskilled to load the seed and fertilizer boxes and cleaning of furrow openers as and when required.

7.4 Wear of soil engaging component:
The wear of furrow openers varied from 0.12 to 0.33 % by mass basis which is normal.

8. LUBRICATION & SERVICING
Greasing was done daily before starting the operation.

9. EASE OF OPERATION AND ADJUSTMENT
Operator has to get down from the tractor to make adjustments on planter.

10. BREAKDOWN AND REPAIRS
No critical or major breakdown was observed during 20.25 hrs. of field operation of cotton planter.

11. COMMENTS AND RECOMMENDATIONS
i) Dimension of three point linkage do not conform to the requirements of IS:4468-2004. Standard 3 point linkage system comply with BIS requirement should be used at regular production level.

ii) Range of seed rate is adjustable from 0.92 to 4.10 Kg/ha by changing gears of metering device, by using seed metering lever.

iii) Fertilizer rate may be adjusted from 17.64 to 147.87 Kg/ha by varying the length of flutes to the hopper gate.

iv) Field efficiency of machine is ranging from 65.6 to 81.1%.
v) The average utilization of drawbar horse power of tractor was 12.0 to 14.8 %.

vi) Lifting and lowering of openers, provision for closing seed discharge, seed covering arrangement and safety arrangement for moving parts have not been provided in machine. The same may be provided as per requirement of IS : 6813- Feb, 2005.

vii) Observation on seed and fertilizer placement as per sowing requirement recommended by agronomical practices was observed satisfactory.

viii) During the entire field tests, no overloading of tractor was observed.

ix) Identification plate should be provided on each machine on regular production level.

12. LITERATURE:

The manufacturer has developed the literature of machine in a single booklet containing brief but specification of machine, operating instructions and part's catalogue. However, it need to be modified as per IS: 8132-1983 incorporating the information on detailed specification, servicing and maintenance instructions and spare parts list for guidance of users and service personals.

TESTING AUTHORITY

(R. M. TIWARI)
ASSISTANT ENGINEER (W/S)

(P. K. CHOPRA)
SENIOR AGRICULTURAL ENGINEER

(A. N. MESHRAM)
DIRECTOR-
