RICE TRANSPLANTER
‘GREAVES (GS-PF-455)’
(SELF PROPELLED-WALK BEHIND TYPE)

GOVERNMENT OF INDIA
MINISTRY OF AGRICULTURE
(DEPARTMENT OF AGRICULTURE & COOPERATION)

NORTHERN REGION FARM MACHINERY TRAINING AND TESTING INSTITUTE
TRACTOR NAGAR, SIRSA ROAD, HISAR-125001 (HARYANA)
4.2 Planter
The gear box, fitting of feed case and planting mechanism, seedling tray, chain cases and planting arms were dismantled and inspected visually. The observations are as under:

14.2.1 Main & planting gear box
The bearings and shafts of wheel were visually inspected. No abnormal wear or breakage of components was noticed. All components were found in satisfactory working condition.

14.2.2 Planting arms
All the four planting arms were dismantled and inspected visually & no abnormal sign of wear tear and breakdown were observed.

14.2.3 Seedling Tray and additional seedling holding tray
The seedling holder & seedling tray were visually inspected and found in normal working condition.

14.2.4 Chain case and wheels
The chain cases of drive wheels were visually inspected. The chains, sprockets and bearings were found in normal working condition.

14.2.5 Floats
All the three floats were examined visually for cracks, punctures, etc and found in satisfactory working condition.

14.2.6 Hydraulic system
All components of hydraulic systems were inspected visually and found in normal working condition.

15. SUMMARY OF OBSERVATIONS, COMMENTS AND RECOMMENDATIONS

15.1 Engine Performance Test

</tbody>
</table>
The maximum power kW(Ps) of engine was recorded as 1.78 (2.42) at 3438 rpm against manufacturer’s declared power of 1.7(2.3) kW (Ps).

The specific fuel consumption kg/kWh (kg/hph) corresponding to maximum power was recorded as 0.399 (0.293).

The maximum torque N-m (kgf-m)s of the engine was recorded as 5.4 (0.55).

The back up torque of engine was recorded as 6%.

The maximum lubricating oil temperature was recorded as 130.3 °C which is considered to be normal against the manufacturer declared limit of 150°C.

15.2 Noise Level
Noise level at operator’s ear level was recorded as 82.7 dB(A), which is within the maximum and danger limit of 85dB(A) and 90dB(A) respectively specified for continuous exposure of 8 hours.

15.3 Mechanical Vibration
The amplitude of mechanical vibration on all the controls and components are within 100 microns except that engine bonnet, seedling tray carrier & engine mounting base.

15.4 Field Test
The transplanter was operated in varying field conditions for 50.92 (excluding 0.5 h as running in) hours to transplant ‘PUSA-5 & CSR-30’ variety of paddy seedlings. The results are summarized as under.

- The average depth of transplanting was recorded as 4.5 to 5.2 cm.
- The variation from mean of average depth of transplanting was recorded as 1.03 to 7.2 percent.
- The spacing between row to row was recorded as 30.0 to 31.0 cm.
- The deviation in row spacing from the fixed setting of 300 mm was observed as Nil to 1.6 percent.
- The average number of plants per hill was recorded as 1 to 7.
- The average spacing between hills was recorded as 13.0 to 16.0 cm.
- The % variation from mean of spacing between hills was recorded as Nil to 10.3
- The average total number of hill in 1 m² was recorded as 26.7 to 30.7
• The % variation from mean of total number of hill in 1 m² was recorded as Nil to 6.9

• The average number of missing hills was recorded as 0.33 to 3.33 / m²

• The average number of floating seedlings was recorded in 1 m² as 0.33 to 1.33.

• The average number of buried seedlings was recorded in 1 m² as Nil.

• The total number of transplanting faults was recorded as 0.66 to 4.33 / m²

• The hourly fuel consumption was recorded as 0.719 to 0.890 l/h and fuel required for planting of one hectare area was recorded as 4.21 to 5.56 l.

15.4.1 During the field operation, at no stage any momentary overloading of the engine was noticed.

15.4.2 The quality of puddling, uniformity in leveling of the field. Standing water over puddle, uniformity of the nursery mats and presence of weeds remained in the puddle soil affected the performance of the planter to some extent.

To obtain best results from the machine, it is necessary to have the field well puddled and subsequently allow to settle for 2-3 days field with 2-4 cm depth of standing water.

15.4.3 The number of missing hills per square meter area is attributed mainly to the non uniform germination of nursery mat.

15.4.4 The quality of work was observed to be smooth during entire transplanting operation & overall performance of the machine was found satisfactory.

15.5 Components / assembly inspection

15.5.1 The engine was dismantled after 61.84 hours of operation and wear of critical components were observed to be within the limits.

15.6 Safety Provisions

The machine has the following safety provisions.

• A front bumper.
• Front and rear bonnet above the engine and gear box.
• Drive belt protective covers.
15.7 Ease of operation and adjustments
- All the controls, which were used frequently, are within the easy reach of the operator.
- The handling of machine was easy and stable and the operator can work continuously for about two hours.
- The planting depth, hill spacing and number of seedling per hill can be adjusted easily.
- No obstruction in operator's vision was observed after loading seedling hold tray on the frame mounted on transmission housing.
- No other operational difficulty was noticed during the operation of the transplanter.
- Hydraulic system is provided to enable the operator to cross over the bunds and while turning the machine (even with full load) in the field.

15.8 Labour requirement
A trained operator is required for efficient operation of the machine. 1-2 helper is required for safe handling and loading of mats.

16. LITERATURE
The manufacturer had provided operator's manual & part's catalogue with the machine printed in English language. The literature provided is found to be adequate for guidance of the users and services personnel. However, it is recommended to modify this literature as per IS:8132-1983 in Hindi & other Indian regional language to meet the regional requirement.
