19. COMMENTS AND RECOMMENDATIONS

19.1 Mechanical vibration

The amplitude of mechanical vibration of components marked as (*) in chapter 12 of this report are observed on higher side. This calls for providing suitable remedial measures to dampen the vibration in order to improve the operational comfort and service life of various components & sub-assemblies.

19.2 Field performance test

No noticeable defect observed during field test.

19.3 Ease of operation and safety provision

No noticeable difficulties observed during operation of combine harvester.

- **19.4** There is no provision for varying oscillation of sieve. It should be looked into.
- **19.5** Hardness and chemical composition

Hardness & chemical composition of knife blade, knife guard and knife back is not within the limits specified in their respective IS: 6025-1982. It should be looked into for corrective action at regular production level.
